CONTENTS OF VOLUME 159

NUMBER 1, NOVEMBER 15, 1986

A Double-Label Two-Dimensional Gel Electrophoresis Procedure Specifically Designed for Serum or Plasma Protein Analysis
T. T. Wheeler, P. C. Loong, T. W. Jordan, and H. C. Ford 1

Enzyme-Linked Immunodetection of Proteins on Coomassie Blue-Stained Two-Dimensional Cellulose Acetate Membranes
Toshiko Fujita, Tosifusa Toda, and Mochihiko Ohashi 8

Isolation of Ribosomal Subunits from an Extremely Halophilic Archaebacterium *Halobacterium halobium* by Hydrophobic Interaction Chromatography
Haruo Saruyama 12

Rapid Isolation and Characterization of Hybridization Selected Recombinants from Lambda Genomic Libraries *David J. Porteous* 17

One-Lane Sequence Analysis of Oligodeoxyribonucleotides
Barbara J. B. Ambrose, Miguel M. Castro, and Reynaldo C. Pless 24

Two-Dimensional Electrophoretic Characterization of Microheterogenous Myelin Basic Protein Fragments *Andrew Chantry and Paul Glynn* 29

Removal of the ϵ Subunit from *Escherichia coli* F_1-ATPase Using Monoclonal Anti-ϵ Antibody Affinity Chromatography *Stanley D. Dunn* 35

Sodium-Sensitive Glass Microelectrode: Modified Thomas Recessed-Tip Configuration
Leo R. Pucacco, Susan K. Corona, and Norman W. Carter 43

Graphic Presentation and Analysis of Inhibition Data from Ligand-Binding Experiments
David B. Bylund 50

Enzyme Activity Dot Blots: A Rapid and Convenient Assay for Acetyltransferase or Protein Kinase Activity Immobilized on Nitrocellulose
C. David Allis, Louis G. Chicoine, Claiborne V. C. Glover, Elizabeth M. White, and Martin A. Gorovsky 58

Determination of Amine Oxidases in Tissues by Peroxidation-Induced Chemiluminescence of Phthalazines *Luciana Avigliano, Antonello Rossi, Giordana Marcozzi, and Alessandro Finazzi-Agró* 67

Extraction of Adenine Nucleotides from Cultured Endothelial Cells
John C. Shryock, Rafael Rubio, and Robert M. Berne 73

Northern Hybridization Analysis of RNA Using Diethylpyrocarbonate-Treated Nonfat Milk *Linda I. Siegel and Edward Bresnick* 82

An Automated Method for Determining Buoyant Density of Nucleic Acids Using a Preparative Ultracentrifuge *Arun K. Attri and Kenneth W. Minton* 88

Radioimmunoassay of Rat Apolipoprotein A-IV *William L. Crump III, Bette C. Sherrill, Antonio M. Gotto, Jr., and Giancarlo Ghiselli* 96

Normal- and Reverse-Phase HPLC Separations of Fluorescent (NBD) Lipids
Ona C. Martin and Richard E. Pagano 101

Determination of Cell Number in Monolayer Cultures
R. J. Gillies, N. Didier, and M. Denton 109

A Study of Interferences in Glucose Measurements in Blood by Hydrogen Peroxide Based Glucose Probes *Giuseppe Palleschi, Mohammad Ali Nabi Rahni, Glenn J. Lubrano, J. Ngeh Ngwainbi, and George G. Guilbault* 114

Density-Based Separation of Liposomes by Glycerol Gradient Centrifugation
Erik Goormaghtigh and Gene A. Scarborough 122
Cooled Sample Introduction Probe for Liquid Secondary Ionization Mass Spectrometry
A. M. Falick, F. C. Walls, and R. A. Laine 132
Interference by Lipids in the Determination of Protein Using Bicinchoninic Acid
Ralph J. Kessler and Darrell D. Fanestil 138
Determination of Thiol Proteins Using Monobromobimane Labeling and High-Performance Liquid Chromatographic Analysis: Application to *Escherichia coli* Thioredoxin *Paul C. Chinn, Vincent Pigiet, and Robert C. Fahey* 143
High-Performance Ion-Exchange Chromatographic Separation of Proteoglycans
Gregory S. Harper, Daniel J. O'Shannessy, and William A. Gahl 150
A One-Step Technique for the Subcellular Fractionation of Total Cell Homogenates
Janice N. Morand and Claudia Kent 157
A Solid-Phase Competitive Radioimmunoassay for the Insulin Receptor
Richard A. Roth and Jacqueline Beaudoin 163
A Rapid Method for the Isolation of Peroxisomes from Rat Liver
Mridul K. Ghosh and Amiya K. Hajra 169
High-Performance Liquid Chromatography and Ultraviolet Spectrophotometry for Quantitation of Tryptophan in Barytic Hydrolysates *S. Delhaye and J. Landry* 175
The Use of Disulfonatonaphthalimide Fluorescent Dyes for the Fluorescence Polarization Immunoassay of Steroids
B. Desfosses, P. Urios, N. Christeff, K. M. Rajkowski, and N. Cittanova 179
Isolation of 3,4-Dihydroxyphenylalanine-Containing Proteins Using Boronate Affinity Chromatography
Clifford J. Hawkins, Martin F. Lavin, David L. Parry, and Ian L. Ross 187
In Situ Melanin Assay for MSH Using Mouse B16 Melanoma Cells in Culture
Walter Siegrist and Alex N. Eberle 191
A General Assay for UDPglucuronosyltransferase Activity Using Polar Amino–Cyano Stationary Phase HPLC and UDP[U-^{14}C]Glucuronic Acid
Michael W. H. Coughtrie, Brian Burchell, and John R. Bend 198
Use of High-Performance Liquid Chromatography for Quantitative Determination of the Native Form of the Third Component C3 of Human Complement
Yutaka Muto, Kunie Ito, and Yoji Arata 206
The Preparation of Tritiated Tunicamycin
Ruthann E. Hunnicutt and Roy W. Keenan 210
Thiophilic Adsorption of Immunoglobulins—Analysis of Conditions Optimal for Selective Immobilization and Purification *T. William Hutchens and Jerker Porath* 217
A Procedure for Northern Blot Analysis of Native RNA
Edouard W. Khandjian and Claude Méric 227
Isolation of Mutant Adenosine Deaminase by Coformycin Affinity Chromatography
Mary Jo Danton and Mary Sue Coleman 235

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell biology and cell, tissue, and organ culture methods that are of general application.

— Membranes and membrane proteins. These methods form a major section of interest.

— Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

— Purification methods for enzymes and other proteins which contain a major novel aspect and in which a high level of purity is achieved. Acceptance for publication is based on the contribution made toward protein purification and not on the successful purification of a specific protein.

— Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that offer a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel, rapid, improved, simple, sensitive, efficient, convenient, new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the article title or running title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1986 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index,* 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Martin, S. C., and Ekman, P. (1986) *Anal. Biochem.* **154,** 395–399.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Zoller, M. J., and Smith, M. (1983) *in* Methods in Enzymology (Wu, R., Grossman, L., and Moldave, K., eds.), Vol. 100, Part B, pp. 468–500, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

New for 1987 from Academic Press

GENOMICS

An International Journal of Gene Mapping and Sequencing

Editors-in-Chief
Victor A. McKusick, *The Johns Hopkins University*
Frank H. Ruddle, *Yale University*

Genomics will be devoted to the analysis of the hierarchical organization of the human and other complex genomes. This journal is being established to provide a forum for research that integrates information arising from recent advances in

- molecular cloning strategies
- DNA sequencing and computational analysis
- large-scale restriction mapping
- human and comparative gene mapping by Mendelian and physical approaches

Genomics will highlight a new area of scientific inquiry—the comparative analysis of the different levels at which genetic information is organized. In addition to basic research and its applications, the journal will publish new techniques, and will promote efficient communication with the major genetic databases.

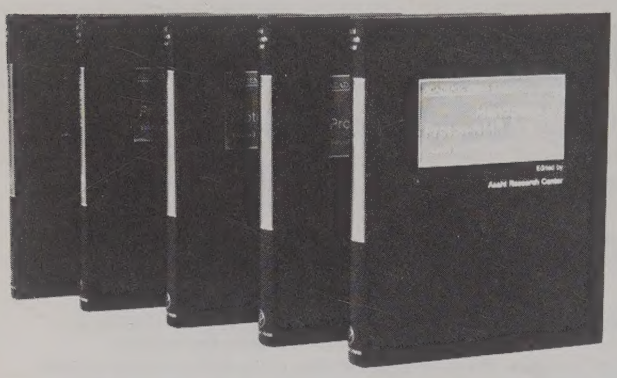
A powerful aid for tomorrow's research



HANDBOOK OF PROTON-NMR SPECTRA AND DATA

Volumes 1–5

Edited by
Asahi Research Center Co., Ltd.

Supervised by
Shin-ichi Sasaki

The **Handbook of Proton-NMR Spectra and Data** provides accurate and precise p-NMR absorption spectra of approximately 15,000 organic compounds. Samples of a wide variety of compounds, including antibiotics, steroids, vitamins, amino acids, and chemical and pharmaceutical intermediates, have been measured with 90 MHz FT-NMR spectrometers (and, in some cases, with resolution spectrometers as high as 400 MHz) under constant conditions. In addition to the large number of spectra measurements and assignments, this chartbook includes related spectral data, such as the CAS registry number, and an extensive, easy-to-use index.

This comprehensive and up-to-date handbook will be an invaluable aid for molecular structure analysis and determination.

CONTENTS OF EACH VOLUME

- Proton-NMR Spectra and Data
- Chemical Name Index
- Molecular Formula Index
- Substructure Index
- Chemical Shift Index

HANDBOOK OF PROTON-NMR SPECTRA AND DATA
